The WWR3-2015, 3rd International Conference Wood in World Rivers aims to analyze the importance of wood of all sizes, both living and dead, and the riparian forests which produce wood, a crucial element for geomorphology, ecology and management of rivers.

The main objectives of the conference are to:

- synthesize the knowledge on the physical dynamics and ecological interactions of wood in streams and rivers in different geographical regions;
- create a framework for interpreting and applying research results and management systems;
- assess physical and biological responses of large wood in stream restoration;
- explore links between physical and ecological dynamics of large wood, resource management systems and the communities and cultures in which they are applied.
